SAHARA MOTORS DUBAI

The 2026 Toyota Corolla Cross Elite Edition is a refined SUV designed to deliver practical performance, comfort, convenience, and versatility. Powered by a 2.0L petrol engine with 1,987 cc displacement, it produces 126 kW at 6,600 RPM and works with a Direct Shift CVT automatic transmission for smooth driving. With a maximum speed of 180 km/h and a 47-liter fuel tank, the Corolla Cross is suitable for daily commuting, highway travel, and longer journeys. Front and rear disc brakes, MacPherson independent front suspension, torsion beam rear suspension, and EPS steering support confident handling and controlled driving. It features 17-inch alloy wheels for stability.

The Toyota Corolla Cross Elite Edition combines useful exterior and interior features for everyday comfort and convenience. Halogen headlights and daytime running lights provide visibility, while the sun/moon roof adds an appealing premium touch. The cabin includes leather seats, a powered driver seat, genuine leather gear shift knob, steering-mounted audio controls, front multi-information display, reading light, front storage compartment, and luggage storage compartment. A rear camera, parking sensors, rear windshield defogger, and anti-theft locking system provide additional convenience, visibility, and security for daily driving and parking situations. The three-spoke steering wheel provides easy access to audio functions, while the multi-information screen keeps essential driving information clearly visible. The leather-appointed cabin creates a comfortable environment. These features add comfort.

Safety and driver-assistance equipment includes SRS airbags, ABS, Vehicle Stability Control, Traction Control, Hill-start Assist Control, and Tyre Pressure Monitoring System for enhanced control and occupant protection. The Corolla Cross also features Dynamic Radar Cruise Control, Pre-Collision System with pedestrian recognition, Lane Departure Alert, Lane Tracing Assist, Auto High Beam, Road Sign Assist, Predictive Active Driving Assist, and Emergency Driving Stop System. These technologies support safer and more controlled journeys by assisting with vehicle stability, braking, lane awareness, adaptive cruising, visibility, and emergency situations across different driving environments and road conditions. Additional safety functions help reduce driver workload and provide useful assistance during changing traffic conditions. The braking and stability systems work together to maintain control and support awareness on roads. Lane-focused features assist with maintaining the intended path during travel further.
